

# Managed Backup

## Asigra.

**LOGICALIS**  
Business and technology working as one

## Business Requirement

*Protect your enterprise data from equipment failure and other events.*

Enterprises need to ensure that they have a secure copy of all business critical files and databases for use in the event of equipment failure or other disasters.

Failure to do so can make even a simple event to cause irrecoverable business damage, not just to operations, but to the reputation of organisation and can lead to the organisations non-compliance with industry regulations.

## Logicalis Solution

Logicalis' backup service eliminates the risk of data loss from any physical or virtual servers, desktops and laptops. By automatically protecting data in the background, Logicalis' Backup solution ensures complete data protection without interrupting users. We also provide a secure web-based access portal and mobility support, through which users can easily retrieve data, without helpdesk intervention. The solution utilises advanced encryption to safeguard enterprise data during transmission, storage, and recovery.

Choosing Logicalis for backup and recovery solutions gives enterprises the industry-leading technology partner with a proven track record of successful data protection.

Logicalis provides customers with highly flexible deployment options for both on premise and cloud-based backup.

## Features

- ✓ Fully automated, easy to use, endpoint data protection—the backup works in the background as users go about their daily task.
- ✓ Patented Send Once deduplication technology—reducing the volume of backed-up endpoint data up to 85 percent.
- ✓ Advanced encryption in transit and in storage, providing maximum protection for all data storage.
- ✓ Web-based access portal lets users access their backed-up data anywhere, without IT intervention.
- ✓ Connected Mobility App—providing access to backup data “on the go” through industry leading tablet platforms.
- ✓ Bandwidth Throttling—complete control over the amount of network bandwidth used during backups.

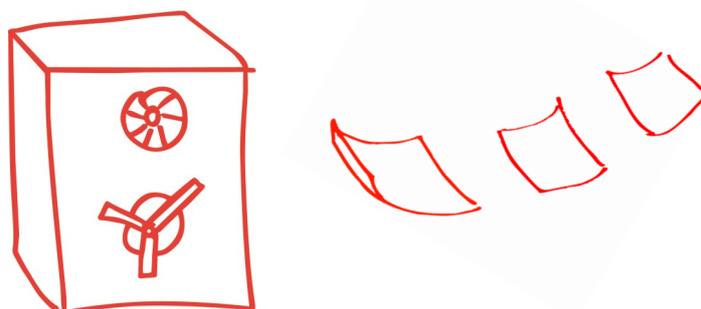

## Business Benefits

- ✓ With scheduled and automatic backups, enterprise data is always available.
- ✓ Provides visibility, accessibility, and control over mobile endpoint data.
- ✓ Keeps enterprise data off-site and secure.
- ✓ Unlimited scalability for organisations.
- ✓ Frees up IT time and resources by outsourcing data protection to a trusted, proven leader.
- ✓ Provides real-time meaningful capture of endpoint data for use in backup and recovery, Legal Hold, eDiscovery, and data analytics.
- ✓ Highest levels of scalability and availability.
- ✓ Flexible deployment options (on premise, cloud and hybrid).
- ✓ Agentless architecture
- ✓ Incremental forever backups
- ✓ De-Duplication of data
- ✓ WAN optimised solution
- ✓ Minimise downtime of critical business systems in the event of a disaster.
- ✓ Scalable, secure and automated cloud backup with real time monitoring.

## Logicalis' Managed Security Services

Logicalis has a unique capability to build, host, support and manage any size of communications and computing infrastructure. Accredited by the leading security vendors and managed service providers, Logicalis operates UK Managed Service Centres and in-house UK Tier 3 managed hosting facilities.

---

## Service Value

*Logicalis' Managed Backup Services ensures all aspects of delivery meet with your required commercial, service and business levels requirements.*

- ✓ Increase confidence in organisations data restoration posture, as the system is being monitored 24x7.
- ✓ Reduces operational costs and the resources needed to support daily security management tasks, allowing staff to focus business-critical priorities.
- ✓ No need to buy infrastructure or storage.
- ✓ Buy now, backup tomorrow.
- ✓ Meets crucial requirements for audit and compliance standards.

---

## Service Overview

*Logicalis' Managed Backup Services offer the following key service deliverables:*

- ✓ Management of a range of manufactures.
- ✓ Incident management in accordance with SLA.
- ✓ Managed change control.

- ✓ Liaison with software and hardware support providers.
- ✓ Administrative management of software and hardware licences.
- ✓ ISO27001 and ISO9001 and 22301 certified.
- ✓ Baseline standard and security cleared analysts.
- ✓ Performs bare metal recovery.
- ✓ Up to 256 Bit AES Encryption.

---

## About the Team

Our dedicated security professionals are certified and trained in security disciplines and methodologies. The Value that the Logicalis Managed security Services security adds is not limited to our extensive security team in the SOC Security Operations Centre that help with correlation of endpoint security events.

Our seasoned team are skilled in deploying, maintaining, alerting and reporting on security events that could potentially result in security incidents.

*Restore your  
Data in the  
Event of a  
Disaster*
